Profile

Founder of PixelPulse PH and full-stack developer with 15+ shipped projects across web and mobile applications, experienced in building scalable systems and integrating AI/ML into production.

Technical Skills

Languages	PHP, SQL, Python, JavaScript, TypeScript, C++, Java, Dart, HTML/CSS
Frontend	React, React Native with Expo, Flutter
Backend & Cloud	AWS, Laravel, Node.js, Supabase, Google Compute Engine, Firebase, Vercel, REST APIs
AI/ML	Tensorflow, Pytorch, scikit-learn, Hugging Face, n8n
Tools	Git, Docker, Figma, Tableau, Power BI

Experience

Junior Fullstack Developer - DAD: Daclan Accountant (Auckland, New Zealand) Jan 2026 - May 2026

- Delivered user-facing features for a large accounting SaaS platform, improving day-to-day workflows across client management, tax returns, invoicing, reporting, working papers, and secure document signing.

Laravel, PHP, JavaScript (Vue, React, Redux, Hooks), Vite, TanStack Query, Zod, Zustand

Founder & Freelance Developer - PixelPulse Solutions (Remote) [Facebook](#) [Instagram](#) Oct 2024 - Apr 2026

- Built and shipped **15+ client projects** across mobile, web, and games with multiple returning clients across engagements. Managed full project lifecycle solo and practiced scoping, version control, iterative releases, and client communication across engagements alongside full-time studies with no missed deadlines.

PHP, SQL, JavaScript (React), Flutter, Python, Git

Education

Bachelor of Science in Computer Science - Lyceum of the Philippines University - Cavite Aug 2023 - May 2027

- Consistent Dean's Lister & Resident Scholarship Holder (A.Y. 2023–2025, current), GWA: **1.18**
- Certiport / Pearson VUE - Database IT Specialist**

May 2025

Projects (visit my portfolio for a complete list)

Physics of Life and Stuff - Client Project, University of Santo Tomas Manila [GitHub](#) [Live](#) Jan 2026

- Delivered a live research website for a UST Department of Math & Science organization, **chosen over agency alternatives**. Designed a zero-cost CMS using Google Sheets and Apps Script, **cutting backend hosting to \$0** while giving non-technical researchers full content control without a dashboard login.

TypeScript (React), Google Sheets with Apps Script, Vercel, Git

Beth Aven E-commerce Website - Client Project [GitHub](#) [Live](#) Dec 2024 - May 2025

- Solo engineered a production e-commerce platform serving **1,000+ users and 20+ products** end-to-end dynamic listings, cart, and full checkout flow with zero reported downtime post-launch. Self-managed deployment on a GCE virtual machine, owning uptime, updates, and server maintenance with no external DevOps support.

PHP, SQL, JavaScript, Google Compute Engine, Git

Piraso - BYTEForward Hackathon 2025 South Luzon, Finalist [GitHub](#) [Pitch](#) Oct 2025

- Led a 4-person team to a **Finalist placement among 80 teams** of South Luzon's top CS/IT students. Engineered a visual database tool translating SQL which enabled non-technical users to write valid SQL with zero code.

Dart (Flutter), Python, Revlabs APIs, Supabase, Node.js, SQL, Git

TreeQuest - Personal Project [GitHub](#) [Live](#) Nov 2024

- Built an educational browser game that helps students learn binary tree traversals through interactive visualizations and guided preorder, inorder, and postorder practice.
enditemize *HTML, CSS, JavaScript*
